# Commander™

## Handheld Programming Unit (HPU)

## An Easy Transition for Current Palm Users

### The software is pre-loaded and easy to update.

- After you install the batteries, just set the date and time.
- Chicago Faucets designed and developed the software, as well as the Commander unit - so updates and improvements will be easier and faster.
- Unit operates with flash memory card: we've eliminated memory loss and time-consuming reinstalls.
- Flash and USB software transfer for easy, fast updates.

### The navigation is simplified.

- We used common terms across fittings to help eliminate confusion.
- *Troubleshooting* is addressed within *Diagnostics* on our new HPU – allowing you to see the problem and possible solutions all within the same area.
- We've made other common-sense changes to the navigation:
  - *Notes* can be added in *Edit.*
  - *Adjust Mode Setting* is now *Running Mode.*
  - Non-mode or *Convenience Settings* are now *Other Settings.*

### It's easy to transfer files to your new HPU.

- You can transfer data files from your Palm device to your new HPU.
- USB file transfer using included cable.
- All versions of Commander Desktop support Palm data.
- New version of Commander Desktop software includes E-Tronic 40 support.

### We've added new features and updates.

- We've added *Clean Mode* button on main menu for faster access.
- We've added *Engineering, Pipe Clean,* and *Clean Mode* functions to E-Tronic 40.
- We've added visual indicators to let you know that *Engineering* and *Pipe Modes* have been enabled.
- Parts and accessories lists have been updated and expanded – including our new SSPS.
